

## Liebherr R912 Litronic Excavator Operators Operating Manual

Tool-System for a variety of jobs Liebherr working tools for excavators were designed as problem solvers for the most varied applications. The carefully balanced program ranges from standard buckets for digging and loading of loosened material to buckets for heavy-duty jobs in the mining industry with extreme break-out forces and high wear and tear. Equipped with effective, to the relating ground matching teeth the Liebherr digging tools provide a maximum productivity and longevity.

Performance Liebherr digging tools are particularly productive excavator components at the very latest technological level. Special bucket shapes, permit maximum transmission of power, provide the best penetration- and outstanding digging characteristics. Optimized bucket capacities and improved heap-cones provide the best turn-over performance.

Reliability Liebherr digging tools are in-house designed and manufactured. Specific material selection, specialized heat treatment and lowest machining tolerances are utilized in order to achieve the especially toughness and the high longevity. The convincing result: outstanding dependability under the most severe job conditions.
